Use-Case Specification: Use-Case Specification: Answer general information (Step 2)
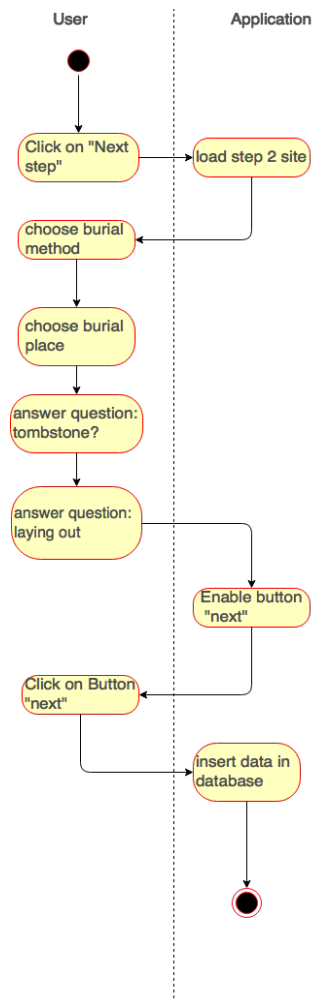

1.   Use-Case Name

1.1   Brief Description

This use case is one of the often used ones, because it's the next step after you created your user.

2.   Flow of Events

2.1   Basic Flow

Mockup:

2.2   Feature File

```
1    Feature: Answer general Informations
2         As a User
3         I want to add general Informations about my funeral to my account
4
5         Scenario: Answer general Informations works
6              Given I click "Next" on Registration form
7              And I am logged in as "Marie"
8              When I choose "sea burial" in optionlist
9              And I optional enter  "Nordfriedhof Hannover" into inputfield 1
10             And I choose "yes" on radiobutton with name "Tombstone"
11             And I choose "no" on radiobutton with name "Laying out"
12             And I click on element having name "Next"
13             Then I navigate to "Step3.html"
14
15
```

3.   Special Requirements

3.1   Usability

Because our target group are older people, we will make the first step very user-friendly. There should be a "Help"-Button and also the description for the input fields should be easy to understand for everyone.

4.   Preconditions

The user must pass through step 1 (Register) to do step 2 (answer general information).

5.   Postconditions

5.1   Save information

The database must save all information(burial method, burial place, tombstone, laying out) for the new account.

5.2   Go on

After saving the first general information the user will be redirected to a new page, where he can insert more information.

6.   Extension Points
